Solving Systems of Equations (by substitution)

1) $y = 6x - 11$
   $-2x - 3y = -7$

2) $2x - 3y = -1$
   $y = x - 1$
More practice...

3) \( y = -3x + 5 \)
   \( 5x - 4y = -3 \)

4) \( -3x - 3y = 3 \)
   \( y = -5x - 17 \)
